Summary

I started my career as a researcher in 2013 and since then I have been working almost continuouslyat the university, thanks to the acquisition of external funding. I already acquired fonds for research during my bachelor and master studies, and it was followed supported during my PhD. With more than 10 years of experience, I have developed multiple data collection, including several clinical trials, performed multiple advanced analyses with Matlab and R studio and disseminated the results in international journals. I have also performed multiple meta-analyses.

Keywords: exercise performance; subjective experiences; meta science; cognition.

Publications last 5 years
